

**HYGIENIC
SUSPENDED
COMPRESSOR
PAPER BIN**

- Unsealed residue of patients treatment stuck on the paper (or food in case of restaurants) in direct contact with the surrounding space.

- Unhygienic, messy, dirty, and horrible to look at.

- Untidy unpractical process to throw and compress the paper in the bin, and to empty the paper bin

VS

- Nicely designed safe stainless steel paper bin

- Opening lid with soft close hinges

- Extendable paper compressor handle

- Paper bag storage pockets

- Custom paper bag fixture

- Custom paper bags specifically designed for this product

All hospitals and medical studios make use of paper sheets which are applied on medical beds where patients sit and lay down to be treated or examined. And in almost every hospital and medical studio, once finished treating the patient, the paper sheet is thrown in an inappropriate paper bin. This often applies also to restaurants using paper tablecloths.

The “hygienic suspended compressor paper bin” will not only contain the paper waste in a more hygienic way, but also make it easy and fast to throw away the paper sheets and compress them to optimize the paper bin’s use as much as possible before having to empty it.

Invention

This invention provides a fast, practical, elegant and hygienic solution to store and compress paper sheets after use, with minimal mechanical parts guaranteeing durability and effortless installation.

Features

- Nicely designed safe stainless steel paper bin.

The choice of material and design allow easy cleaning/dusting, and recyclability.

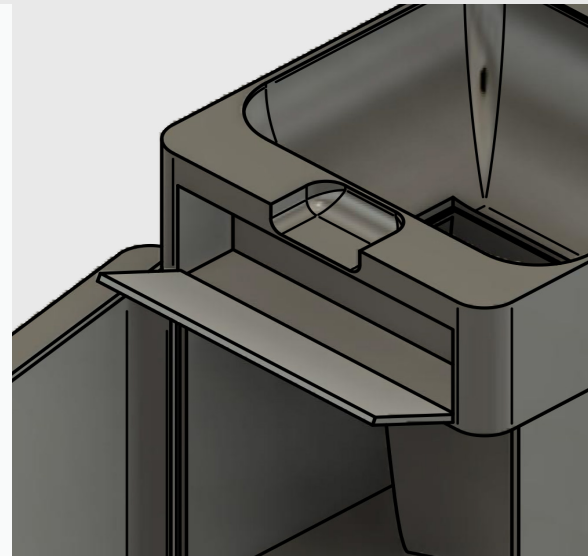

- Opening lid with soft close hinges

Modern hinges will avoid the lid closing violently provoking loud noise and danger. It will also avoid you to manually close the lid as it will automatically smoothly and silently close.

- Paper bag storage pocket

The storage pocket will allow you to tidily store replacement paper bags. The storage pocket cover will open by pushing it and unlocking it. Same for the paper bag fixture compartment door.

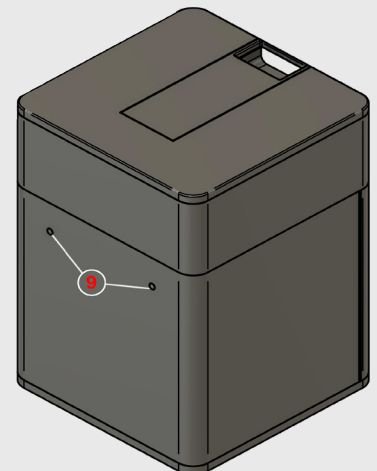

- Custom paper bag fixture

As has been used for decades in vacuum cleaners, the custom fixture for the paper bags will allow a fast installation and removal.

- Suspended installation

The paper bin can be suspended from the ground, by fixing it with screws through its holes on the back, giving multiple advantages: Easier to clean around it (like with modern suspended toilets), easier installation and removal of paper bag, more comfortable position of handle.

-Patent Pending Paper compression mechanism

The extendable cover lid handle will allow you to compress paper by opening the lid with a comfortable movement and grip and then use the extendable handle to compress the paper.
